

ECO-BOARD

100 percent recyclable, plastic-free silver cardboard for luxury packaging.

RATTPACK has developed a unique process that is used in the manufacture of high quality gold / silver compounds for cardboard completely without plastic.

This innovation does, like the new packaging law intended, especially for the cosmetic packaging completely recyclable and compostable, but still plays all pieces:

Individual processing options are still available. So the manufacturers can continue to be engaging, unique packaging and make it stand out from others.

With the innovative and attractive material composite, in addition, the packaging weight and material consumption can be reduced and increase the recycling rate. The new sustainable solution provides, entirely in the interests of consumers, a major contribution to resource conservation.

Delivery options

- folding box
- carton blanks

Applications

- cosmetics
- pharmacy
- confectionery

More options:

- Embossed and blind embossing
- suitable for direct contact with food
- Simulation of hot foil stamping

plastic free silver carton for resource-saving luxury packaging
